Final Project Report: Digital Literacy Portfolio
Course Code: CSE0001
Course Title: Digital Literacy
Student Name: Harshini Taparia
Registration Number: 25BCE10656
Branch & Year: B. Tech CSE Core, 1st Year

1. Introduction

As a Student Digital Ambassador, I have developed this portfolio to demonstrate essential digital skills required for the modern academic and professional landscape. This project covers five core modules: digital presentation, professional networking, collaborative platforms, communication etiquette, and cybercrime awareness. The goal is to provide a roadmap for peers to navigate the digital world safely and effectively.

2. Task 1: Digital Literacy Infographic

Objective: To create a visual resource explaining the pillars of digital literacy.

Tools Used: Canva

Reflection: In creating my infographic, I utilized Canva to present four critical areas of digital literacy to my peers. Beyond the basics of safety and tools, I added a section on Professional Online Presence because, as first-year students, we need to realize that our digital footprint starts now. I specifically highlighted how platforms like LinkedIn and GitHub serve as professional portfolios. What I found most interesting while designing this was the challenge of balancing visual appeal with technical information. I had to use concise bullet points to ensure the design didn't look cluttered. This task helped me understand my role as a Digital Ambassador by forcing me to think about what information is most valuable for a student’s long-term career success.

3. Task 2: Student Digital Portfolio

Objective: To establish a professional presence across major technical and networking platforms.

Platforms Updated: GitHub, LinkedIn, and Stack Overflow.

Reflection: For Task 2, I established my professional identity by creating and updating profiles on GitHub, LinkedIn, and Kaggle. On GitHub, I created a profile README that introduces my technical interests and the Air Quality Predictor project. On LinkedIn, I updated my education and professional headline to reflect my current status as a B. Tech student. This task taught me that a "Digital Portfolio" is a living document. I realized that as I gain more skills, these profiles must evolve to reflect my growth. Seeing my profile icons together in one place gave me a sense of professional readiness that goes beyond traditional paper resumes.

4. Task 3: Platforms and Collaboration

Objective: To demonstrate technical problem-solving and cloud-based data collection.

Activities: Completed Hacker Rank "Solve Me First" and created a Google Form Quiz.

Reflection: For Task 3, I explored platforms essential for technical practice and cloud collaboration. I created an account on Hacker Rank and completed the 'Solve Me First' challenge to build my foundational coding skills. Additionally, I developed a 'Digital Literacy Awareness Quiz' using Google Forms. This quiz includes five targeted questions on topics like phishing, password security, and professional networking. Building this form taught me how to use cloud tools for data collection and batch-wide communication. By linking the form to a Google Sheet, I can now monitor responses in real-time. This task emphasized that

digital literacy is not just about using software, but about choosing the right platform for a specific collaborative or technical goal.

5. Task 4: Digital Communication and Etiquette

Objective: To practice professional email writing and social media responsibility.

Activities: Drafted two professional emails and a Social Media Do's/Don'ts checklist.

Reflection: During my research for Task 4, I analysed a scenario where a student lost a prestigious internship offer because of poor digital communication. The student had posted unprofessional remarks about a previous employer on a public social media thread. When the internship coordinator conducted a routine background check, these posts were discovered, leading to the withdrawal of the offer. This situation highlights the permanence of our digital footprint. The student should have maintained a clear boundary between personal opinions and professional presence. This task taught me that email etiquette and social media responsibility are not just about following rules; they are about protecting our long-term career prospects.

6. Task 5: Cybercrime Awareness

Objective: To research specific cyber threats and provide prevention strategies.

Activities: UPI Fraud Case Study and 10-point "Stay Safe Online" Checklist.

Reflection: While researching cybercrime for Task 5, I was most surprised by how sophisticated 'Social Engineering' has become in India, specifically regarding UPI fraud. It was eye-opening to learn that many victims are technically literate students who fall for scams due to the psychological pressure and 'urgency' created by attackers. I previously believed that having a strong password was enough, but I now realize that human error is often the weakest link in digital security. As a result, the one habit I will personally change is my 'click-first' mentality. I have committed to pausing and verifying the source of every payment request and link I receive.

7. Conclusion

This project has been a transformative experience in understanding my role in the digital ecosystem. From building a **GitHub** repository to drafting professional emails and researching cybercrime, I have moved from being a passive user of technology to a responsible digital citizen. As a Digital Ambassador, I feel equipped to help my peers navigate these platforms safely while building a professional brand that will last throughout our B. Tech journey.
